

# PERIODONTOLOGY AND PHARMACOLOGY FOR GENERAL PRACTICE

## WHAT YOU'LL LEARN

This course is designed for dental professionals and delivers critically appraised, evidence-based strategies for accurate periodontal and peri-implant diagnosis. It provides a chronological overview of the assessment phase of care, including identifying, diagnosing, communicating, treating, and stabilizing periodontitis through non-surgical periodontal therapy. The course will also review the latest 2023 implant maintenance guidelines, focusing on prevention, early detection, and management of peri-implant conditions.

The second half of this course provides dental professionals with an understanding of how medical histories influence clinical decision-making and patient safety. Participants will review the pharmacology and clinical use of commonly prescribed medications, antibiotics, including analgesics, and differentiate between non-opioid and opioid options for managing acute dental pain. Emphasis will be placed on evidence-based opioid prescribing practices and strategies to minimize risk.

## Course Outline

### Periodontology for General Practice – 3hrs

- Assessment Phase Components
- Periodontal Classification
- Implants Maintenance
- Treatment Planning for NSPT
- Decision-Making Tree

### Pharmacology for General Practice – 3hrs

- Review of Dental Pharmacology
- Antibiotics
- Non Opioids and Opioids
- Evidence-based opioid prescribing and risk management
