

# PERIODONTOLOGY, IMPLANT MAINTENANCE, AND AIRWAY-CENTERED CARE FOR GENERAL PRACTICE

## WHAT YOU'LL LEARN

This course is designed for dental professionals and delivers critically appraised, evidence-based strategies for accurate periodontal and peri-implant diagnosis. It provides a chronological overview of the assessment phase of care, including identifying, diagnosing, communicating, treating, and stabilizing periodontitis through non-surgical periodontal therapy. The course will also review the latest 2023 implant maintenance guidelines, focusing on prevention, early detection, and management of peri-implant conditions.

The second half of the seminar will introduce the fundamentals of orofacial myofunctional therapy (OMT) and its role in airway-centered, physiologic care. Attendees will explore how myofunctional dysfunction impacts oral and systemic health and understand when to integrate or refer for therapy.
